

Preparing your art for your Exhibition

All frames and canvas must have d-rings installed to work with our cable system

D-rings come in many shapes and sizes as shown above (the smaller d-rings will work with most art, larger heavy art will require larger d-rings)

Metal frames (photo top right) the cable system will hook into metal frame hardware

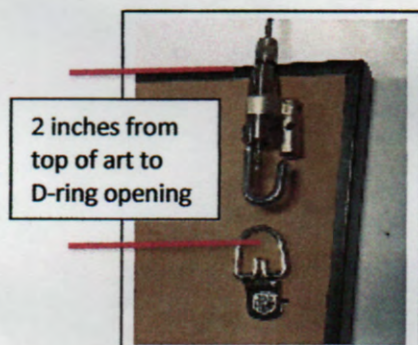

Photo (above left) is of the hook and cable system we use in all our galleries

The d-rings should be installed 2 inches down from top of art as shown above (if art is 10" or smaller please contact me for further instructions)

Please make sure all art is marked to work with your inventory (see center photo above) this ensures that your art can be clearly identified

If you have any questions please call or email
